<i>Preface</i>	<i>xi</i>
<i>Acknowledgments</i>	<i>xiii</i>
<i>Textbook Guide</i>	<i>xv</i>
0.1 List of Thermodynamics Textbooks by Discipline	xv
0.2 Terminology and Notation Used in This Book	xvi
0.3 Terminology and Notation Used in Textbooks	xviii
1 About This Book	1
1.1 Who Should Use This Book?	2
1.2 Philosophy of This Book	3
1.3 Four Core Concepts of Thermodynamics	3
1.4 How to Use This Book	5
I Equilibrium	
2 Philosophy of Thermodynamics	11
2.1 Thermodynamics	11
2.2 Scientific Models & Laws	12
2.3 Statistical Mechanics	14
3 Thermodynamic States, Variables & Quantities	17
3.1 Thermodynamic Variables & Quantities	17
3.2 More on Thermodynamic Quantities	19
3.3 Thermodynamic & Molecular States	20
4 Zeroth Law & Thermodynamic Equilibrium	23
4.1 Equation of State	23
4.2 Thermodynamic Equilibrium	26
4.3 Zeroth Law	27
4.4 Ideal Gases & Non-ideal Systems	29
II Energy	
5 Molecular Energy, Internal Energy, & Temperature	33
5.1 Energy at the Molecular Scale	33
5.2 Internal Energy	35
5.3 Intermolecular Interactions & the Kinetic Model	37
5.4 Equipartition Theorem & Temperature	38

viii Contents

6	Boltzmann Distribution & the Kinetic Model	41
6.1	Boltzmann Distribution	41
6.2	Maxwell-Boltzmann Distribution	42
6.3	Maxwell Distribution of Speeds	44
III	Thermodynamic Change	
7	First Law & Thermodynamic Change	49
7.1	System & Surroundings	49
7.2	Thermodynamic Change	50
7.3	First Law	52
8	Work, Heat, & Reversible Change	55
8.1	State Functions & Path Functions	55
8.2	Definition of Work	57
8.3	Definition of Heat	59
8.4	Reversible & Irreversible Change	60
8.5	A Gas Expansion Example	62
9	Partial Derivative Quantities	65
9.1	Internal Energy & Heat Capacity at Constant Volume	66
9.2	Enthalpy & Heat Capacity at Constant Pressure	67
9.3	Other Partial Derivative Quantities	70
9.4	Partial Derivatives & Differentials	71
IV	Entropy	
10	Entropy & Information Theory	77
10.1	Why Does Entropy Seem So Complicated?	77
10.2	Entropy as Unknown Molecular Information	79
10.3	Amount of Information	80
10.4	Application to Thermodynamics	84
11	Entropy & Ideal Gas	87
11.1	Measuring Our Molecular Ignorance	87
11.2	Volume Contribution to Entropy	88
11.3	Temperature Contribution to Entropy	91
11.4	Combined Entropy Expression	92
11.5	Entropy, Heat, & Reversible Adiabatic Expansion	94
12	Second Law & Spontaneous Irreversible Change	97
12.1	Heat Engines & Thermodynamic Cycles	97
12.2	Traditional Statements of the Second Law	98
12.3	Entropy Statement of the Second Law	99
12.4	Information Statement of the Second Law	100
12.5	Maximum Entropy & the Clausius Inequality	103

13	Third Law, Carnot Cycle, & Absolute Entropy	107
13.1	Entropy & Reversible Change	107
13.2	Carnot Cycle & Absolute Zero Temperature	109
13.3	Third Law & Absolute Entropy	111
V	Free Energy	
14	Free Energy & Exergy	115
14.1	What Would Happen If Entropy Were a Variable?	116
14.2	Helmholtz and Gibbs Free Energies	117
14.3	Second Law & Maximum Work	119
14.4	Exergy	121
15	Chemical Potential, Fugacity, & Open Systems	123
15.1	What Would Happen If n Were a Variable?	123
15.2	Chemical Potential	125
15.3	Ideal Gas & Fugacity	126
VI	Applications	
16	Crazy Gay-Lussac's Gas Expansion Emporium	131
16.1	Sales Pitch	131
16.2	How to Solve Gas Expansion Problems	132
16.3	Comprehensive Compendium	135
17	Electronic Emporium: <i>Free Online Shopping!</i>	139
VII	Appendices	
	Appendix A: <i>Beards Gone Wild!</i> Facial Hair & the Founding Fathers of Thermodynamics	143
	Appendix B: Thermodynamics, Abolitionism, & Sha Na Na	147
	Appendix C: Thermodynamics & the Science of Steampunk	149
	Steampunk Gallery	151
	Travel Try Its	153
	Photo Credits	155
	<i>Index</i>	<i>159</i>
